

Yun Cheng Lin

yclin5258@gmail.com — 917-495-5258 — github.com/wilduni

Education

Massachusetts Institute of Technology (MIT)

Cambridge, MA

Bachelor of Science in Artificial Intelligence and Decision-Making

June 2026

GPA: 4.5/5

Relevant Coursework: Algorithms and Data Structures, Software Construction, Web Design

Skills

Languages: Python, JavaScript/TypeScript, HTML, CSS

Tech Stack: Git, React, Vue, MongoDB, SQL

Relevant Experience

MIT Computer Science Undergraduate Lab Assistant

Cambridge, MA

6.100A & 6.100B

Sep 2024 – May 2026

- Assisted students in developing computational thinking skills and debugging techniques in introductory programming courses
- Guided students through concepts including dynamic programming, graph algorithms, and data science applications
- Supported problem-solving and code optimization in real-time lab environments

Projects

Multiplayer Blackjack Web Game

TypeScript, React, Express, Socket.io

- Built a multiplayer Blackjack game using TypeScript, React (frontend), and Express (backend)
- Designed component-based UI in React to manage game views, player states, and interactions
- Implemented server-side game logic such as card dealing, and turn handling using Express
- Enabled client-server communication using socket.io

Farm Sprint

JavaScript, Phaser, React

- Developed a quest-based game where players must complete tasks before their quest board overflows.
- Built game mechanics and rendering using the Phaser HTML5 game engine in JavaScript
- Integrated third-party game assets from itch.io for visuals and animations
- Designed game scenes and terrain from itch.io assets, and custom assets using Tiled.

Linear Gradient Demo

JavaScript, Vue, HTML, CSS

- Developed an interactive tutorial website to teach and visualize the CSS **linear-gradient** function
- Built a guided tutorial system with progressive levels, input validation, and feedback
- Implemented a playground feature enabling live preview and manipulation of gradient parameters
- Engineered dynamic UI using Vue.js components and reactive state management for user interaction
